SUMMARY

Software Engineer with experience developing software in C++ and C#/.NET, designing scalable systems, reusable frameworks and tools. Collaborated with programmers, designers and artists to build and ship commercial software products, including **3 games released on Steam** and various **projects on Itch.io**.

SKILLS

- **Programming Languages**: C, C++ (C++20), C#, Java, Python and Assembly.
- **Software Engineering**: Object-Oriented Programming (OOP), software design patterns, modular and data-driven design, memory management and performance optimization.
- **Web Development**: HTML5, CSS3, PHP, JavaScript, jQuery, SQL, relational database design.
- **.NET**: Desktop console application development, reusable libraries and tools using the C#/.NET ecosystem.
- **Unreal Engine 5**: Developed a custom C++ framework with multiple plugins and reusable systems. Worked on multithreaded programming, data-driven architectures and editor tools.
- **Unity**: Developed a custom C# framework with reusable systems and editor tools, designed to support multiple projects and simplify development workflows.
- **Development Tools**: Git, Git-Flow, GitHub, Python automation, CI/CD pipelines, Jira and HacknPlan.
- **Operating Systems**: Windows, Linux/Unix environments, Command Line (cmd/Bash).
- **Networking & APIs**: Network replication systems, client-server architectures, Steamworks and Google Play Services integration.
- **Math & Physics**: Linear algebra, 3D math, physics-based reasoning.

EXPERIENCE

Villains Studio - Negative Edge — Software Engineer - C++ - C# - Python *Nov 2024 – Jul 2026*

- Designed and implemented core systems including inventory, weapons, RPG mechanics, UI, AI and data management.
- Created VGOAP, a fully data-driven GOAP framework reused across multiple projects to handle AI decision-making.
- Led gameplay architecture decisions, working closely with design, art and audio to solve implementation challenges.
- **Result:** Showcased at **Gamescom** and **DevGAMM**; released on Steam.

Villains Studio - Golem Rumble — Software Engineer - C++ - C# - Python *Mar 2026 – Apr 2026*

- Developed core gameplay systems including UI, AI, trap mechanics, team management and gameplay flow for a multiplayer PvP project.
- Built a modular Battle Pass plugin with encrypted save data, cosmetic skin management and tutorial progression using a state machine.
- **Result:** Showcased at **IGDA**; released on Steam.

Independent - Weabot — Software Engineer - C++ - C# *Jan 2024 – Jul 2024*

- Designed gameplay architecture and built modular inventory, save system, AI, UI and quest system.
- Delivered reusable gameplay solutions in close collaboration with designers and artists.
- **Result:** Released on Steam and Itch.io.

EDUCATION

Event Horizon School *Oct 2022 – Oct 2025*
Software Engineering program (1000+ hours) covering programming fundamentals, computer architecture, memory management, object-oriented programming, software design and development with C# and C++.
Final Grade: 30/30

I.T.I.S. "C. Facchinetti" *Sep 2015 – Oct 2022*
Computer Science and Software Engineering program covering programming, web development, databases and software fundamentals. Completed a work-based learning **experience at a web development company**.
Final Grade: 94/100

LANGUAGES

Italian – Native; **English** – B2 Professional working proficiency.
